Sprint 2 Feedback –

What students liked –

- The face scanning process was quick and easy, and the success notification gave instant confirmation.

- The sign in process was also straightforward like any other website's sign in.

- The dashboard layout felt intuitive, and everyone had no issues navigating through My Classes or Messages.

- The calendar attendance view made their monthly attendance records easy to view and understand.

- Page loads were consistently under 2 seconds.

- Some students liked the clean, simple, "uncluttered" look of the webpages.

- The role-based access approach that we took feels similar to the UNT role-based access UNT may have implemented. It was mentioned how student could only access parts of the system that they were supposed to have access to.

What needs work -

- Sidebar tab text/icon is hard to see when the browser is zoomed to 125 % or higher.

- Scans sometimes fail in low-light rooms and students want a prompt with tips like "move closer" or "increase the lighting" after the first failure.

- Chat feels sort of plain and some students asked for the ability to have quick reaction support similar to Apple and Android.

- Similar to the chat feed, webpages seem very plain in their current state.

- Dark mode was mentioned as a toggle for evening/night viewing.

- One student was concerned about privacy and asked to be provided with a link to the data privacy policy.

- There is no way to report errors like failed scans or submit a bug report.

- There is no mobile support; the webpage does not look good on a mobile device.
